PROFESSIONAL EXPERIENCE

Automation & Integration Intern | Coding Caliber

Jan 2026 – Mar 2026

3-month internship focused on building production-ready AI-powered automation workflows integrating Jira, Slack, and cloud APIs using n8n.

- Built a Jira–Slack Status Updater: Developed a natural language workflow enabling team members to update Jira issue statuses directly from Slack (e.g. "/jira-update Move KAN-5 to In Progress"). Integrated OpenRouter AI (Claude 3.5 Sonnet) to extract issue keys and target statuses, used Jira REST API v3 for transitions, reducing manual Jira navigation.
- Designed a Sprint/Board Summary Generator: Created an on-demand Slack command (/sprint-summary) that queries the Jira API, aggregates issue statistics, calculates completion percentages, and delivers a visual progress report with per-assignee breakdowns to Slack channels.
- Automated Issue Creation from Slack: Built an AI-powered workflow that parses free-text Slack messages using LLM prompting and automatically creates structured Jira tickets (Bug, Story, Task) with correct fields and project assignment.
- Implemented Multi-Workflow n8n Pipelines: Designed end-to-end automation pipelines using n8n with webhook triggers, Jira nodes, Slack nodes, LangChain LLM nodes, aggregation, and conditional logic — all without custom backend servers.
- Maintained CI/CD workflow documentation: Committed all production workflows to GitHub (github.com/haseebarif11/jira-slack-n8n-workflows) with comprehensive setup guides, troubleshooting docs, and example commands.

Technologies: n8n, Jira REST API, Slack API, OpenRouter (Claude 3.5 Sonnet), JavaScript, Webhook Architecture, JSON, Git/GitHub

EDUCATION

BS in Artificial Intelligence | University of Management and Technology

2023 – 2027

CGPA: 3.37 / 4.00 — Lahore, Pakistan

- Relevant Courses: Data Structures & Algorithms, OOP (C++), Database Systems, Programming for AI, Front-End Web Development, Machine Learning, Operating Systems, Deep Learning

PROJECTS

DeepFake Face Detection | Python · PyTorch · EfficientNet-B3 · MTCNN · Gradio · Hugging Face Spaces

- Built and deployed a live forensic deepfake detection app that classifies uploaded face images as authentic or AI-generated, using an EfficientNet-B3 classifier paired with MTCNN for face detection/alignment.
- Designed the output to go beyond a single label: the app reports confidence percentages and a breakdown of forensic signals (e.g. noise patterns, color variance, and other artifact indicators) to make the prediction interpretable.
- Deployed as a public, always-on Hugging Face Space with a Gradio interface, making the model directly testable by recruiters and users without any setup.

Live demo: huggingface.co/spaces/HaseebArif11/DeepFake-Face-Detection

Jira–Slack Integration Suite | n8n · Jira API · Slack API · OpenRouter AI

- Engineered 3 production workflows: Status Updater, Issue Creator, and Board Summary Generator integrated into Slack slash commands
- Implemented AI-driven intent extraction pipeline using OpenRouter to parse natural language commands into structured Jira API calls

Deployed on Cloudflare tunnels with real-time webhook processing; repository at github.com/haseebarif11/jira-slack-n8n-workflows

Family Tree Chatbot | Python · AIML · Prolog · Streamlit

- Built a conversational chatbot that answers natural language family-relationship queries using an AIML pattern-matching layer paired with a Prolog knowledge base

- Developed a Python-Prolog bridge to translate AIML-parsed queries into logical inference calls, returning accurate relationship deductions across multi-generation family trees
- Extended the system with dynamic data entry and deletion — adding/removing people, relationships, and attributes via natural language commands, with changes persisted directly to the Prolog knowledge base through file handling

Delivered both a Streamlit web interface and a console interface; repository at github.com/haseebarif11/family-tree-chatbot

Fake News & Misinformation Detection Pipeline | *Python · BERT · RoBERTa · Scikit-Learn · LIME · Streamlit*

- Built an end-to-end misinformation detection system classifying both news articles and tweets as real or fake, trained across four datasets (LIAR, ISOT, COVID-19 Fake Tweets, Twitter15/16)
- Benchmarked classical ML baselines (Logistic Regression, Random Forest) against fine-tuned BERT and RoBERTa transformers, achieving up to 100% accuracy on news classification and 85.5% on tweet misinformation

Added LIME-based model interpretability to surface which words drive fake-classifications, and deployed the full pipeline as an interactive Streamlit application

Human Activity Recognition | *Python · TensorFlow · EfficientNetB0 · XGBoost · scikit-learn*

- Built a hybrid deep learning + ML pipeline that uses EfficientNetB0 for image feature extraction, feeding into an XGBoost/Random Forest ensemble to classify human activities from images
- Benchmarked multiple ML models with end-to-end training, evaluation, and visualization; exported trained artifacts including model weights, scaler, and label encoder

Designed for Kaggle GPU workflows with full notebook reproducibility; repository at github.com/haseebarif11/Human-Activity-Recognition

TECHNICAL SKILLS

Languages: Python, C++, JavaScript

Automation: n8n, Webhook Architecture, REST APIs, JSON pipelines

AI / ML: OpenRouter, LangChain, BERT, RoBERTa, LIME, MediaPipe, OpenCV, NumPy, Pandas, TensorFlow, XGBoost, EfficientNetB0, EfficientNetB3, MTCNN, PyTorch

APIs & Tools: Jira REST API v3, Slack API, GitHub, Hugging Face Spaces, Gradio, VS Code, Postman

Web Dev: HTML, CSS, JavaScript, Node.js, Streamlit

Databases: MySQL

CERTIFICATIONS & TRAINING

Internship Completion Certificate — Coding Caliber

Issued: February 2026 | 3-Month Program: Automation & Integration Development

- Completed a structured 3-month internship building real-world AI automation systems using n8n, Jira, Slack, and LLM APIs
- Demonstrated proficiency in designing multi-step webhook workflows, API authentication, error handling, and production deployment

LANGUAGES

Urdu — Native | English — Proficient (Professional Working)
